About Yearn Cash

Yearn Cash seeks to be the cryptocurrency by the people and for the people.

Our intention is to be adopted for use as a peer-to-peer (P2P) payment system, which gives the power back to the people as well as solve real world problems that are faced daily.

Yearn Cash is an ERC-20 Token, which are blockchain-based assets that have value and can be received and sent. ERC-20 tokens reside on the Ethereum blockchain.

Another key benefit of Yearn Cash is that it uses the latest technological advances such as Defi and is completely open to integration of future industry developments, such as sharding and quantum tech amongst other future developments.

**“Our aim is to be
a \$20 billion value
industry with real
world use case
solutions”**

Yearn Cash Contract:

0x9CF4679c67BEE8dA2D6F58c64592fF6beE79330

HOW TO ADD YFIC TO UR WALLET:

STEP ONE

- Open up your personal Metamask, Mew or Binance Trust wallet
- click “**custom Token**”, and
- add the Contract highlighted:
`0x9CF4679c67BEE8dA2D6F58c64592fF6beE79330`

STEP TWO

- Yearn Cash (Yfic) is now in your personal Metamask/Binance trust wallet.

Summary

Yearn Cash aims to be the cryptocurrency of the people and industry, by the people for the people. Yearn Cash's intention is to be adopted for use as a p2p payment system, which gives the power back to the people and to solve real- world problems faced daily.

Yearn Cash is a suite of products in Decentralized Finance (DeFi) inpr which provides lending aggregation, yield generation, and insurance on the Ethereum blockchain Bitcoin transactions are slow and expensive and it can be argued that Bitcoin is somewhat centralized. This will not be tolerated in the industry and that's why nowadays altcoin projects are beating out bitcoin. Bitcoin is simply a store of value.

Yearn Cash is implemented by a 9 member multi-signature wallet. Changes must be signed by 6 out of the 9 wallet signers in order to be implemented. The members of the multi-signature wallet were voted in by YFIC(Yearn Cash) holders and are subject to change from future governance votes.

More importantly than financial gain, cryptocurrency can be used as a tool of liberation, hence is why Yearn Cash was born. Yearn Cash is an ERC-20 and achieves fast transactions speed. Yearn cash can be built on the chain. The Project Uik6 crypto is meant to be free and used as your own bank with no government control.

Our initiative to make distribution correct and fair. The intention isn't to get rich quick, but to give the power back to the people and have a more efficient transfer of value resulting in building wealth with time. Yearn Cash is to be a more convenient and efficient payment system, with faster payment settlement, and a way for a merchant to receive money with no need for a third party to beinvolved.

This creates a way for local businesses to accept payment without high transaction fees. Our goal is to be able to transfer money across the globe with low fees simple payment solutions, and a way for people to have complete control of their money.

Yearn Cash is the solution. Scarcity will generate value because we have a low total supply that will create stability in the marketplace. With our investors and industry safe from heavy market manipulation, Yearn Cash is a secure and efficient protocol to use..

DeFi

DeFi or Decentralized Finance, is at its root a set of Smart Contracts running independently on blockchains such as the Ethereum network. Smart Contracts may or may not interact with other smart contracts and even other blockchains.

The goal of DeFi is to enhance profitability of investors in DeFi through automated smart contracts seeking to maximize yields for invested funds.

DeFi is marked by rapid innovative progression and testing of new ideas and concepts.

ERC-20

A cryptocurrency protocol based on the Ethereum blockchain. An ERC-20 coin, by definition uses this protocol.

Yearn cash is an Erc-20 token.

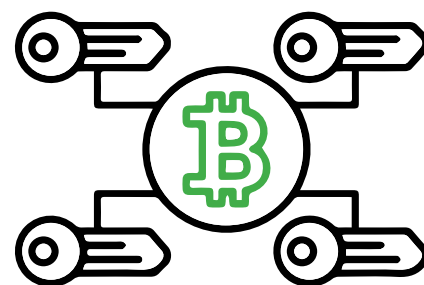

Yearn Cash Multisignature Wallet

A multiple signature (multisig) wallet is a cryptocurrency wallet that controls access and changes to one or more Smart Contracts.

Community - governed projects like a decentralized autonomous organization or "DAO" often requires multiple signers to approve a transaction before it will be executed. This is transparent and is not impacted by a central government.

For community - based efforts, Multisig wallets for DAOs and DeFi projects are often implemented as 6 of 9 wallets, where 6 of 9 community wallet signers must agree to sign a transaction before a Smart Contract can be implemented.

What is the Yearn Cash product?

Yearn Cash is a protocol on the Ethereum blockchain. The purpose of which is to offer the user a convenient and simple mobile tool and decentralized product beyond the simple management of decentralized applications.

The ultimate goal of the Yearn Cash protocol is to provide an integrated DeFi platform that users and the community do not need to look for to use. In addition, the Yearn Cash product also provides risk mitigation measures. If we pay attention to all DeFi products, we see maximum market and price manipulation.

The Yearn Cash product token will be sold to the project participants at the beginning stage. The remainder will be distributed in equal shares among the exchanges. The community-driven DeFi project, created by the people of the crypto community, exists and is made for those who are tired of losing and being cheated.

This protocol is built by ordinary people to create decentralized products. All decisions and actions are made to solve real-world problems faced daily. Yield, Savings, Swap (Testnet) will be launched shortly and announced on social media and other media outlets of the Yearn Cash project.
